

Nordic Backup Home Plans

Unlimited storage for your most sensitive, personal data.
Backup now for less than \$5/month.

Backup your data now, before you're lost without it.

Software & Setup

Backups should never slow down your system or be difficult to setup. With our one-click setup, Nordic Backup Home automatically creates a scheduled backup of your computer the first time you log in. We take a snapshot of any open files to avoid interrupting your activity while you work. And with continuous updates, you'll never need to schedule backups. Our backup runs quietly in the background and emails you every time it completes.

Cloud Storage

There is no need to worry about storage quotas with Nordic Backup Home. All of your precious documents and pictures are automatically backed up to your unlimited cloud storage.

Security

our files are made private before they're ever uploaded to Nordic Backup. As each file is transmitted from your computer, it's encrypted with unbreakable 256-bit AES encryption using a private password that only you know. With multiple, world-class data centers and redundant servers, you can rest assured that your personal data is always available and completely secure.

Ready to backup?
Try it free for 30 days.
